DEMOGRAPHIA

Demographia World Urban Areas (World Agglomerations) Population & Projections

April 2009

DEMOGRAPHIA WORLD URBAN AREAS (URBAN AGGLOMERATIONS)

This report contains population, land area and population density for all 763 identified urban areas (urban agglomerations or urbanized areas) in the world with 500,000 or more population as of the volume date. A number of additional urban areas are also listed, including all urban areas over 100,000 in France, New Zealand, Puerto Rico, the United Kingdom and the United States and all urban areas over 50,000 in Australia and Canada. Rankings are indicated only for urban areas of 500,000 and over.

It is estimated that the urban areas with over 500,000 population account for 49.1 percent of the world's urban population as of 2003. A total of 1,370 urban areas of all sizes are included, accounting for 53.8 percent of the world urban population in 2003.

Revisions from the last edition: Better satellite imagery has been made available for a number of urban areas since the publication of the last edition. This has resulted in land area increases or decreases in various urban areas, especially in China and India.

URBAN AREA POPULATION PROJECTIONS

Population projections are provided for the current year (2009), 2025 and 2030 for all 281 urban areas expected to reach 2,000,000 population by 2030. Demographia's listing is the only current estimate and projection for world urban areas that is based upon consistent definition. The principal international authority, the United Nations (UN), produces a listing of urban agglomerations that reports inconsistently on urban geographic, despite its reference to "agglomerations." The UN information, while very useful, contains important deviations from agglomeration geography. This is evident, for example, in Manila, Kuala Lumpur, Jakarta, Seoul and Moscow, where the UN data is for political jurisdictions, rather than urban areas. In other cases, metropolitan area data is shown, such as in Brazil. Finally, the United Nations data is incomplete, excluding some significant urban areas (such as Western Europe's third largest urban area, Essen-Dusseldorf)

These population projections apply the United Nations 2007 World Urbanization projected population growth rates to the base year population estimates in *Demographia World Urban Areas*. The United Nations projections stop at 2025, however, the rate to 2025 is extended to project the 2030 populations. The following cases were developed with other population growth rates:

Colombo: United Nations national urban population projection growth rate used. The United Nations data does not include Colombo.

Essen-Dusseldorf: Average rate for Cologne and Hamburg used. The United Nations data does not include Essen-Dusseldorf.

Frankfurt: Average rate for Cologne and Hamburg used. The United Nations data does not include Frankfurt.

Jakarta: United Nations national urban population growth rate used, due to substantially differing urban area definitions (see Individual Urban Area Notes, below).

Katowice-Gliwice-Tychy: United Nations population projected rate for Warsaw used. The United Nations data does not include Katowice-Gliwice-Tychy.

Kuala Lumpur: United Nations national urban projected population growth rate used, due to substantially differing urban area definitions (see Individual Urban Area Notes, below).

Manila: United Nations national urban projected population growth rate used, due to substantially differing urban area definitions (see Individual Urban Area Notes, below).

Milan: United Nations national urban population growth rate used, due to substantially differing urban area definitions (see Individual Urban Area Notes, below).

Taipei: Taiwan projected population growth rate used, due to substantially differing urban area definitions (see Individual Urban Area Notes, below).

Taoyuan (Chungli): Average rate for Kaoshiung and Taichung used. The United Nations data does not include Taoyuan (Chungli).

Tunis: United Nations national urban population projected growth rate used. The United Nations data does not include Colombo.

United States: Growth rates are based upon the share of the urban area's growth as a portion of overall United Nations projected urban population growth to 2030, based upon metropolitan area data for 2000 to 2008.

DEFINITIONS AND ISSUES

An urban area (urbanized area agglomeration or urban centre) is a continuously built up landmass of urban development. It is the generally the "urban footprint" --- the lighted area that can be observed from an airplane at night. National census authorities in Australia, Canada, France, the United Kingdom and the United States designate urban areas. Except in Australia, the authorities use a minimum urban density definition of 400 persons per square kilometer (or the nearly identical 1,000 per square mile in the United States). In some cases, urban areas have virtually grown together, yet are still considered separate urban areas. This report confines urban areas to a single metropolitan area (below) or labor market area. What constitutes a particular metropolitan area is a matter of

professional judgment. However, there is a necessity to “draw a line,” especially where adjacent urban areas have “grown together,” but remain fairly distinct labor markets. For example:

- A plausible argument could be made for designating the east coast of Japan from Tokyo-Yokohama to Osaka-Kobe-Kyoto as an urban area, because it has nearly “grown together.” Yet, this ribbon of urbanization is multiple metropolitan areas and considered to be multiple urban areas.
- The Pearl River Delta urban areas of Shenzhen, Dongguan, Guangzhou and Foshan in China’s Guangdong province have, for all intents and purposes, grown together. Yet, it would be a mistake to consider this huge swath of urbanization as a single agglomeration. Thus, this report continues to treat Shenzhen and Dongguan as separate urban areas, however combines Guangzhou and Foshan into a single urban area (the integration of these two labor markets is illustrated by the fact that the Guangzhou Metro is being extended into Foshan).

International Urban Areas: Urban areas are confined to a single nation, unless there is unfettered freedom (the lack of customs or identification checking facilities) of movement (including labor) between the adjacent nations. Currently, this condition is met only between some continental nations of the European Union. For example, the Lille urban area is in both France and Belgium yet is considered a single urban area because there is freedom of labor movement without trade, immigration or customs barriers. Alternatively, Geneva (Switzerland)-Annemasse (France, Detroit-Windsor and San Diego-Tijuana are not considered single urban areas because there is not freedom of movement). Moreover, Shenzhen and Hong Kong, adjacent urban areas in China, are considered to separate urban areas, principally because there is not unfettered freedom of movement between the two.

Metropolitan Area: Contrast: An urban area is different from a metropolitan area. A metropolitan area is a labor market and includes substantial rural (non-urban) territory or area of discontinuous urban development (beyond the developed urban fringe). Urban areas draw employees from a much larger area than the area of continuous development. Some agglomeration lists

Municipality (City or Commune): An urban area is different from a municipality (also often called a city or a local government authority). Municipalities have political boundaries that usually include only a part of the urban area. For example, the city of Seoul represents less than one-half of the population of the Seoul-Incheon urban area, which extends well beyond the municipality. On the other hand, a municipality may be considerably larger than an urban area and therefore contain considerable non-urban (or rural) territory. Zaragoza, Spain is an example. A large part of the municipality of Mumbai is rural, composed of the Rajiv Gandhi National Park and thus not included in the urban area. Many of what are referred to as “cities” in China extend far beyond the area of continuous urbanization and (Beijing, Tianjin and Shanghai). The city of Chongqing, which has the largest population of any organism called a city (municipality) in the stretches far beyond any reasonable definition of a metropolitan area and has a land area similar to that of Austria.

Urban Population Density Profiles: This report provides average urban population density data. By necessity, average data masks significant variations within urban areas. For example, the population density of the Phoenix urban areas is more than half-again higher than that of the Boston

urban area. Yet, the highest population densities of the Boston core are at least five times that of the highest density areas in Phoenix. Moreover, Boston has a far more intense commercial core (“central business district” or “downtown”). The difference is that the Phoenix suburbs are considerably more dense than the Boston suburbs. Similarly, London and Athens have similar population densities. Yet, the core densities in Athens are considerably higher than in London. The Athens suburbs, however, are among the least dense in the world. The Essen-Dusseldorf and Milan urban areas have almost identical densities, yet core densities are considerably higher in Milan. The purpose of this presentation is to define the population and density of urban footprints, regardless of their density profiles.

Nonetheless, average density and the geographical expanse of urban areas is important, even without regard to internal population density profile differences. For example, the differences in urban density profiles make only marginal in urban transport planning. This is because with the geographical expanse of nearly all modern, high-income urban areas, automobiles provide by far the greatest coverage, with considerably shorter travel times than public transport. For example, in Phoenix, more than 99 percent of motorized travel is by car, little above the 96 percent of Boston, with its steeper density gradient. Automobiles account for 88 percent of travel in the Essen-Dusseldorf urban area, somewhat more than the 77 percent in Milan, with its steeper density gradient.

Combined Urban Areas: In the United States, metropolitan areas may be combined into Combined Statistical Areas, which are, in effect, larger metropolitan areas. Where the urban footprint extends beyond the basic metropolitan area, Demographia defines includes the entire urban footprint as a combined urban area. In Canada, where national census authorities also define metropolitan areas, the Toronto, Hamilton and Oshawa metropolitan areas are considered a single labor market and are thus combined into a single urban area.

NATION	COMBINED URBAN AREA (Population & Land Area Code “H”)
Canada	Toronto: Toronto, Hamilton, Oshawa
United States	Boston: Boston, Worcester, Nashua (NH)
United States	Chicago, Kenosha (WI), Round Lake
United States	Dallas-Fort Worth: Dallas Fort Worth, Denton
United States	Houston: Houston, The Woodlands
United States	Los Angeles: Los Angeles, Riverside-San Bernardino, Mission Viejo
United States	New York: New York, Bridgeport (CT), New Haven (CT), Trenton (NJ), Danbury (CT), Hightstown (NJ)
United States	San Francisco: Concord, San Francisco, San Jose
A combined urban area consists of adjacent urban areas as defined by the national statistical area that are located within the same labor market area	

BASE YEAR ESTIMATES: METHODS AND CAUTIONS

Demographia uses maps, satellite photographs to estimate continuous urbanization. Demographia also uses small area population data, where available, to match population estimates to urbanized land area.

National census authority data is presented in Australia, Canada, France (except for Marseille, see Individual Urban Area Notes, below), the United Kingdom and the United States. Census of India urban agglomerations are not used because the geographical size of constituent units (municipalities) often includes large rural (non-urban) areas.

Satellite photograph examination may produce higher urban densities than other methods. This is because national census authority approaches include small amounts of rural land in fringe areas (where the units comprising urban areas, such as municipalities (communes) or census tracts are not fully urban). The Demographia estimates include little or no rural area. Tests of the two methods in France and the United States indicate that in most cases the variation is less than 10 percent (with the Demographia estimate producing the smaller land area, or higher density).

As a result, caution should be used within this range in comparing census authority and Demographia data. Further, there are variations in population reliability. The most reliable population estimates are “A.” population estimates. “C” population estimates are generally reliable. Population estimates “D” and “E” are less reliable. Population estimates coded “F” are the least reliable. For example, the population estimates for Shenzhen and Dongguan are based upon press reports (“F”), since the national census excludes millions of residents who do not have permanent resident status.

Cautions: *Demographia World Urban Areas (World Agglomerations) and Population Projections* is a continuing project. Revisions are made as more accurate satellite photographs and population estimates become available. However, it is important to recognize that most of the data is estimated. Appropriate caution is therefore advised.

INDIVIDUAL URBAN AREAS: NOTES

Amman: Includes Az-Zarqa.

Ansan: Included in Seoul-Incheon.

Baltimore: The US Census Bureau combines Baltimore and Washington into a single metropolitan area (consolidated area) but considers the two as separate urban areas.

Bhiwandi: Included in Mumbai.

Boston: Includes Worcester and Nashua.

Bridgeport: Included in New York.

Chicago: Includes Kenosha and Round Lake.

Concord: Included in San Francisco

Dallas-Fort Worth: Includes Denton.

Danbury: Included in New York.

Delhi: Includes Faridabad, Ghaziabad, Noida and Gurgaon.

Denton: Included in Dallas-Fort Worth

Dhaka: The population is lower than other estimates (such as the United Nations), which include metropolitan area population not within the continuously developed urban area. The Demographia population estimate is determined from accumulating smaller area population data from national census data within the urban footprint.

Dongguan: The *Demographia* estimate is based upon press and other reports on the actual population. Dongguan has an unusually large number of unregistered residents.

Faridabad: Included in Delhi.

Foshan: Included in Guangzhou-Foshan

Guangzhou: Includes Foshan

Ghaziabad: Included in Delhi.

Jiangmen: Includes Xinhui.

Gurgaon: Included in Delhi.

Hamilton: Included in Toronto.

Hightstown: Included in New York.

Himeji: Included in Osaka-Kobe-Kyoto.

Houston: Includes The Woodlands.

Huiyang: Included in Huizhou.

Huizhou: Includes Huiyang.

Fukuoka: Shown as a separate urban area. Some sources combine Fukuoka with Kitakyushu (such as the United Nations), which is not a part of the continuous urbanization of Fukuoka. The Demographia population estimate is a “build-up” of municipality population within the continuously developed area (urban area or agglomeration).

Incheon: Included in Seoul-Incheon,

Jakarta: Jakarta is perhaps the only major urban area in the world that has adopted a formal new name for the urban area/metropolitan area that has spread beyond the boundaries of the central city. However, two forms of the new name are used, Jabotabek and Jabodetabek, both names being acronyms formed from major jurisdictions in the area. Various international sources limit their population estimates to DKI Jakarta itself (the national capital district). However, the urbanization of Jakarta extends into the regencies of Tangerang, Bekasi, Bogor and Karawang and the separate cities of Bekasi, Depok and Bogor. Demographia continues to use the “Jakarta” name because of its familiarity. The Demographia estimate is based upon an analysis of limited local authority area data and urban growth rates in the suburban regencies.

Kalyan: Included in Mumbai.

Karachi: The population is lower than other estimates (such as the United Nations), which include metropolitan area population not within the continuously developed urban area.

Kenosha: Included in Chicago.

Kitakyushu: Shown as a separate urban area. Some sources combine Kitakyushu with Fukuoka (such as the United Nations), which is not a part of the continuous urbanization of Kitakyushu. The Demographia population estimate is a “build-up” of municipality population within the continuously developed area (urban area or agglomeration).

Kuala Lumpur: The population is higher other agglomeration estimates (such as the United Nations), which does not include all of the continuously developed urban area. Continuous urbanization extends well beyond the municipality of Kuala Lumpur, for example to Port Klang and the area represents a single labor market (metropolitan area) The Demographia population estimate is a “build-up” of municipality population within the continuously developed area (urban area or agglomeration).

Lagos: Higher population estimates are indicated by some source. The Demographia population estimate is determined from accumulating smaller area population data from the 2006 census.

Lipanshui: Some estimates show this urban area with a population of above 1,000,000 persons. The Lipanshui metropolitan area contains a number of separate urban areas, which do not represent contiguous urbanization. The Demographia urban area estimate is lower.

Los Angeles: Includes Riverside-San Bernardino and Mission Viejo.

Manila: The population is higher other agglomeration estimates (such as the United Nations), tend to be limited to Metro Manila, which is a province level jurisdiction. The continuous urbanization of Manila extends outward into Bulacan, Cavite, Laguna, Rizal and Quezon provinces. The Demographia population estimate is a “build-up” of municipality population within the continuously developed area (urban area or agglomeration).

Maputo: Includes Matola.

Marseille: A Demographia land area estimate is used because the INSEE (census authority of France) urban area definition includes an unusually large rural area (a mountain range, Chaîne de étoile).

Milan: The population is higher other agglomeration estimates (such as the United Nations), which does not include all of the continuously developed urban area, which stretches well into Como, Lecco and Varese provinces.

Mission Viejo: Included in Los Angeles.

Moscow: Demographia is indebted to Richard Forstall, who has provided local authority area population data for portions of Moscow Oblast within the Moscow urban areas. Other estimates (such as the United Nations estimate) include only the municipality of Moscow, which includes only part of the urban footprint.

Mumbai: Includes Kalyan, Bhiwandi and Panvel.

Nara: Included in Osaka-Kobe-Kyoto.

Nashua: Included in Boston.

New York: Includes Bridgeport, New Haven, Trenton, Danbury and Hightstown.

Noida: Included in Delhi.

Osaka-Kobe-Kyoto: Includes Nara and Himeji. United Nations estimates separate Osaka-Kobe and Kyoto and exclude both Nara and Himeji.

Oshawa: Included in Toronto.

Panvel: Included in Mumbai.

Riverside-San Bernardino: Included in Los Angeles.

Round Lake: Included in Chicago.

San Francisco: Includes San Jose.

San Jose (USA): Included in San Francisco.

Seoul-Incheon: Includes Suwon and Ansan.

Shenzhen: The *Demographia* estimate is based upon press and other reports on the actual population. Shenzhen has an unusually large number of unregistered residents.

Stuttgart: The population is lower than other estimates (such as the Millennium Cities Database), which include metropolitan area population not within the continuously developed urban area. The

Demographia population estimate is a “build-up” of municipality population within the continuously developed area (urban area or urban agglomeration).

Suweon: Included in Seoul-Incheon.

Taipei: The population is higher than other estimates (such as the United Nations), which do not include all population within the continuously developed urban area (especially in Taipei County).

Tianjin: The population is lower than other agglomeration estimates (such as the United Nations), which include metropolitan area population not within the continuously developed urban area. The Demographia population estimate is a “build-up” of sub-municipality population within the continuously developed area (urban area or agglomeration).

Tokyo-Yokohama: Includes large areas Tokyo, Kanagawa, Chiba and Saitama prefectures and small areas of Gumma, Tochigi and Ibaraki prefectures.

Trenton: Included in New York.

Toronto: Includes Hamilton and Oshawa.

Washington: The US Census Bureau combines Washington and Baltimore into a single metropolitan area (consolidated area) but considers the two as separate urban areas.

The Woodlands: Included in Houston.

Worcester: Included in Boston.

Xicheng: Included in Yinchuan.

Xinhui: Included in Jiangmen.

Yinchuan: Includes Xicheng.

SOURCES

- A: National census authority data.
- B: Demographia land area estimate based upon map or satellite photograph analysis.
- C: Demographia population "build up" from third, fourth or fifth order jurisdictions (NUTS-3, NUTS-4, NUTS-5 or equivalent)
- D: Population estimate based upon United Nations agglomeration estimate.
- E: Demographia population estimate from national census authority agglomeration data.
- F: Other Demographia population estimate
- G: Estimate based upon projected growth rate from last census
- H: Combination of adjacent national census authority agglomerations.

Some of the national census population data is based upon secondary sources, especially:

<http://www.geohive.com>
<http://www.citypopulation.de>

Some widely cited Internet independent population sites do not conform to broadly accepted standards of analysis. As a result, Demographia recommends only the two sites above, in addition to national census authority information for comprehensive and reliable population data.

COMMENTS AND SUGGESTIONS

Demographia is interested in producing the most accurate possible estimates. Therefore, comments, suggestions, criticism and data is welcome
